Education

Symbiosis Institute of Technology (Expected May 2028)
Bachelor of Technology in Electronics and Telecommunication *CGPA: 8.40*

Technical Skills

Programming Languages: Python, Go, C++, C, JavaScript, SQL
AI & Machine Learning: PyTorch, Scikit-learn, NumPy, Pandas, PySpark, Computer Vision
GenAI & Agentic Systems: LangChain, LangGraph, RAG, VectorDB, Agentic Workflows
Data & Infrastructure: Apache Airflow, PostgreSQL, MySQL, AWS, GCP, Azure, Docker, ETL Pipelines
Backend Development: FastAPI, REST APIs, Microservices, CUDA
Frontend Development: React, Next.js, Tailwind CSS
Visualization & Tools: Matplotlib, Seaborn, Jupyter Notebook, Git

Experience

Software Development Intern Feb 2026-Present
InvestValue Fintech *Remote*

- Built distributed ETL scraping pipelines using Python to extract and clean **1,000+ scholarship records**
- Designed and implemented a recommendation system using collaborative/content-based filtering for 5,000+ active users
- Partnered with backend and fintech teams to integrate scholarship data services into the core investment platform via REST APIs

Artificial Intelligence Research Intern July 2025-Present
SCAAI,Pune *Hybrid*

- Engineered an interest rate prediction pipeline with preprocessing across **100+ features**, eliminating data leakage.
- Led the design and training of regression and Neural Network based models, achieving a Mean Absolute Error of 2.56%
- **Managed full-cycle deployment** of AI solutions on AWS/GCP, ensuring secure handling of confidential financial datasets

Projects

E2E Multimodal RAG Pipeline | *Python,LangChain,FastAPI* Github

- Engineered a state-of-the-art RAG system utilizing Hybrid Search (BM25 + Vector) and GPU-accelerated reranking, achieving **90% QA accuracy**.
- Optimized document ingestion via asynchronous processing, **reducing latency for 500+ page documents by 86% (from 180s to 25s)**. and secured the API against adversarial inputs and rate-limit failures

Dolphin | *Python, Langchain, PostgreSQL, Embeddings* Github

- Implemented a persistent memory infrastructure for LLM Applications retaining memory across **1,000+ conversations** with under **2-second retrieval latency**
- Programmed memory extraction, insertions and retrieval pipelines using local LLM Models and vector embeddings
- Leveraged **CUDA acceleration** and PostgreSQL to architect an open-source, scalable memory management system

Nested Learning and Hope Architecture | *PyTorch, Meta-Learning, Memory-Augmented Models* Github

- **Reimplemented DeepMind's HOPE architecture from scratch in PyTorch**, developing differentiable memory modules and self-modifying weight layers.
- Developed modular, interpretable notebooks for multi-timescale **CMS memory, 5 nested optimizers, and rank-k self-modifying MLPs**, demonstrating inner-loop adaptation during inference on sequence modeling tasks.

CERTIFICATIONS

- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional** – Oracle *Certificate*
- **Advanced Learning Algorithms** – DeepLearning.AI *Certificate*
- **Supervised Machine Learning: Regression and Classification** – DeepLearning.AI *Certificate*
- **MATLAB Machine Learning Onramp** – MathWorks / MATLAB@UCL

Achievements

- 6+ national-level hackathon wins and finalist positions, including events associated with Google and Bajaj Finserv
- Built lab component management system adopted college-wide, serving **800+ users**
- Conducted faculty workshops on LLM workflows,and AI automation systems, achieving **4.98/5 positive** reviews
